CRUD Data Karyawan

Service	Image	Port	Description
web	PHP 8.2 Apache (custom Dockerfile)	8080	CodeIgniter 3 application
database	mcr.microsoft.com/mssql/server:2022-latest	1433	Microsoft SQL Server 2022

Environments

File	Type	Description
`docker-compose.yml`	Production	No volume mounts, optimized runtime
`docker-compose.dev.yml`	Development	Source code mounted, hot reload enabled

🗄️ Database Schema

Tables

employees — Main employee data

Column	Type	Constraints
id	INT IDENTITY	PRIMARY KEY
nip	VARCHAR(20)	NOT NULL, UNIQUE
nama	VARCHAR(100)	NOT NULL
jenis_kelamin	VARCHAR(20)	NOT NULL, CHECK (jenis_kelamin IN ('Laki - Laki', 'Perempuan'))
jabatan_id	INT	NOT NULL, FK → jabatan(id)
tanggal_aktif_jabatan	DATE	NOT NULL
tanggal_masuk	DATE	NOT NULL
status_karyawan	VARCHAR(20)	NOT NULL, CHECK (status_karyawan IN ('Permanen', 'Kontrak'))
is_active	VARCHAR(10)	DEFAULT 'active'

users — Authentication

Column	Type	Constraints
id	INT IDENTITY	PRIMARY KEY
username	VARCHAR(50)	NOT NULL, UNIQUE
password	VARCHAR(255)	NOT NULL (hashed)

role	VARCHAR(20)	NOT NULL
is_active	VARCHAR(10)	DEFAULT 'active'

jabatan — Job position categories

Column	Type	Constraints
id	INT IDENTITY	PRIMARY KEY
nama_jabatan	VARCHAR(100)	NOT NULL, UNIQUE
deskripsi	VARCHAR(255)	NULL
is_active	VARCHAR(10)	DEFAULT 'active'

positions — Normalized position reference (for history tracking)

Column	Type	Constraints
id	INT IDENTITY	PRIMARY KEY
name	VARCHAR(100)	NOT NULL
created_at	DATETIME	DEFAULT GETDATE()
updated_at	DATETIME	DEFAULT GETDATE()

employee_position_history — Position change log

Column	Type	Constraints
id	INT IDENTITY	PRIMARY KEY
employee_id	INT	NOT NULL, FK → employees(id)
position_id	INT	NOT NULL, FK → positions(id)
start_date	DATE	NOT NULL
end_date	DATE	NULL
created_at	DATETIME	DEFAULT GETDATE()

🌐 API Endpoints

Authentication

POST `/login`

- **Request (application/x-www-form-urlencoded):**
  - `username` (string, required)
  - `password` (string, required)
- **Response:**
  - Sukses:

```
{ "status": true, "message": "Login berhasil!", "redirect":
"http://localhost:8080/dashboard" }
```

- Gagal:

```
{ "status": false, "message": "Username atau password salah." }
```

GET `/logout`

- **Response:** Redirect ke halaman login, session dihapus.

Dashboard

Method	Endpoint	Description
GET	`/dashboard`	Dashboard page
GET	`/api/dashboard/stats`	Statistics (admin gets extra data)

Employee CRUD

GET `/api/employees/list`

- **Query Params:**
  - `limit` (int, optional, default: 10)
  - `offset` (int, optional, default: 0)
  - `search` (string, optional)
  - `sort_by` (string, optional, default: "id")
  - `sort_dir` (string, optional, default: "ASC")
- **Response:**

```
{
   "status": true,
   "data": [ { ...employee }, ... ],
   "total": 100,
   "limit": 10,
   "offset": 0
}
```

GET `/api/employees/get/{id}`

- **Response:**
  - Sukses:

```
{ "status": true, "data": { ...employee } }
```

  - Gagal:

```
{ "status": false, "message": "Karyawan tidak ditemukan." }
```

POST `/api/employees/create`

- **Request (application/x-www-form-urlencoded):**

    - `nip`, `nama`, `jenis_kelamin`, `jabatan`, `tanggal_aktif_jabatan`, `tanggal_masuk`, `status_karyawan`, `is_active`
- **Response:**
    - Sukses:

      ```
      { "status": true, "message": "Karyawan berhasil ditambahkan.", "id": 1
      }
      ```

    - Gagal validasi:

      ```
      { "status": false, "message": "Validasi gagal.", "errors": { "nip":
      "NIP wajib diisi" } }
      ```

    - NIP sudah digunakan:

      ```
      { "status": false, "message": "NIP sudah digunakan." }
      ```

POST `/api/employees/update/{id}`

- **Request:** Sama seperti create.
- **Response:** Mirip dengan create, dengan pesan `"Karyawan berhasil diperbarui."`

POST `/api/employees/delete/{id}`

- **Response:**
    - Sukses:

      ```
      { "status": true, "message": "Karyawan berhasil dihapus." }
      ```

    - Gagal:

      ```
      { "status": false, "message": "Gagal menghapus karyawan." }
      ```

GET `/api/employees/{id}/history`

- **Response:**

  ```
  {
     "status": true,
     "data": {
        "employee": { ...employee },
        "history": [ { ...position_history }, ... ]
     }
  }
  ```

Penjelasan Alur

- **Frontend**: Komponen utama (login, dashboard, list, form, history) melakukan request AJAX (GET/POST) ke endpoint backend.

- **Backend**: Controller menerima request, memproses validasi, otorisasi, dan business logic, lalu berinteraksi dengan model.
- **Model**: Model melakukan query ke database (SQL Server) untuk mengambil, menambah, mengubah, atau menghapus data.
- **Database**: Tabel utama: `users`, `employees`, `jabatan`, `positions`, `employee_position_history`.

Contoh alur:

- User login → POST `/login` → Auth Controller → User_model → `users`
- Lihat data karyawan → GET `/api/employees/list` → Employee Controller → Employee_model → `employees` JOIN `jabatan`
- Tambah karyawan → POST `/api/employees/create` → Employee Controller → Employee_model/Position_history_model → `employees`, `employee_position_history`

Data Rules

- Each employee may have multiple position history records
- First position is automatically logged when employee is created
- The **latest/current position** is the record where `end_date IS NULL`
- Position changes are tracked automatically — no manual history entry needed

---

👥 User Roles & Dashboard Differentiation

Admin Dashboard

Widget	Description
Karyawan Aktif	Count of active employees
Laki-laki	Male employee count
Perempuan	Female employee count
Permanen	Permanent employee count
Kontrak	Contract employee count
Total Jabatan	Total positions count
Perubahan Jabatan Terbaru	Latest 5 position changes
Quick Links	Positions, History pages

User Dashboard

Widget	Description
Karyawan Aktif	Count of active employees
Laki-laki	Male employee count
Perempuan	Female employee count
Permanen	Permanent employee count

Kontrak	Contract employee count

User dashboard does **NOT** contain: Total Jabatan, position management widgets, latest changes table, or position/history quick links.

🔄 Flowchart Proses CRUD Data Karyawan

Flowchart berikut menggambarkan alur proses utama aplikasi dari frontend, backend, hingga database:

Aplikasi CRUD Data Karyawan menggunakan CodeIgniter 3, Microsoft SQL Server, dan Gentelella Admin Template, berjalan di Docker.

🖥️ End-to-End Architecture (Frontend–Backend–Database)

Overview

Penjelasan Alur

- **Frontend**: Komponen utama (login, dashboard, list, form, history) melakukan request AJAX (GET/POST) ke endpoint backend.

- **Backend**: Controller menerima request, memproses validasi, otorisasi, dan business logic, lalu berinteraksi dengan model.
- **Model**: Model melakukan query ke database (SQL Server) untuk mengambil, menambah, mengubah, atau menghapus data.
- **Database**: Tabel utama: `users`, `employees`, `jabatan`, `positions`, `employee_position_history`.

Contoh alur:

- User login → POST `/login` → Auth Controller → User_model → `users`
- Lihat data karyawan → GET `/api/employees/list` → Employee Controller → Employee_model → `employees` JOIN `jabatan`
- Tambah karyawan → POST `/api/employees/create` → Employee Controller → Employee_model/Position_history_model → `employees`, `employee_position_history`

Data Rules

- Each employee may have multiple position history records
- First position is automatically logged when employee is created
- The **latest/current position** is the record where `end_date IS NULL`
- Position changes are tracked automatically — no manual history entry needed
